

Nibbler

MODEL JN1601

004772

INSTRUCTION MANUAL

⚠ WARNING:

For your personal safety, READ and UNDERSTAND before using. SAVE THESE INSTRUCTIONS FOR FUTURE REFERENCE.

SPECIFICATIONS

Model		JN1601	
Max. cutting capacities	Steel up to 400 N/mm ²	1.6 mm / 16 ga	
	Steel up to 600 N/mm ²	1.2 mm / 18 ga	
	Steel up to 800 N/mm ²	0.8 mm / 22 ga	
	Aluminum up to 200 N/mm ²	2.5 mm / 13 ga	
Min. cutting radius	Outside edge	50 mm	
	Inside edge	45 mm	
Strokes per minute (min ⁻¹)		2,200	
Overall length		261 mm	
Net weight		1.6 kg	
Safety class		□ /II	

- Due to our continuing programme of research and development, the specifications herein are subject to change without notice.
- · Note: Specifications may differ from country to country.

SYMBOLS

END201-2

The following show the symbols used for the equipment. Be sure that you understand their meaning before use.

 \Box i

.....Read instruction manual.

.....DOUBLE INSULATION

.....Only for EU countries

Do not dispose of electric equipment together with household waste material!

In observance of European Directive 2002/96/EC on waste electric and electronic equipment and its implementation in accordance with national law, electric equipment that have reached the end of their life must be collected separately and returned to an environmentally compatible recycling facility.

Intended use

The tool is intended for cutting sheet steel and stainless sheet steel.

Power supply

The tool should be connected only to a power supply of the same voltage as indicated on the nameplate, and can only be operated on single-phase AC supply. They are double-insulated in accordance with European Standard and can, therefore, also be used from sockets without earth wire.

For European countries only

Noise and Vibration

The typical A-weighted sound pressure level is 83 dB (A). Uncertainty is 3 dB(A).

The noise level under working may exceed 85 dB (A).

- Wear ear protection. -

The typical weighted root mean square acceleration value is not more than 2.5 m/s².

These values have been obtained according to EN60745.

EC-DECLARATION OF CONFORMITY

We declare under our sole responsibility that this product is in compliance with the following standards of standardized documents, EN60745, EN55014, EN61000 in accordance with Council Directives, 89/336/EEC, 98/37/FC

GENERAL SAFETY RULES

GEA001-3

↑ WARNING:

Read all instructions. Failure to follow all instructions listed below may result in electric shock, fire and/or serious injury. The term "power tool" in all of the warnings listed below refers to your mains-operated (corded) power tool or battery-operated (cordless) power tool.

SAVE THESE INSTRUCTIONS

Work area safety

- Keep work area clean and well lit. Cluttered and dark areas invite accidents.
- Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases or dust. Power tools create sparks which may ignite the dust or fumes.
- Keep children and bystanders away while operating a power tool. Distractions can cause you to lose control.

Electrical safety

- Power tool plugs must match the outlet. Never modify the plug in any way. Do not use any adapter plugs with earthed (grounded) power tools. Unmodified plugs and matching outlets will reduce risk of electric shock.
- Avoid body contact with earthed or grounded surfaces such as pipes, radiators, ranges and refrigerators. There is an increased risk of electric shock if your body is earthed or grounded.
- Do not expose power tools to rain or wet conditions. Water entering a power tool will increase the risk of electric shock.
- Do not abuse the cord. Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges or moving parts. Damaged or entangled cords increase the risk of electric shock.
- When operating a power tool outdoors, use an extension cord suitable for outdoor use. Use of a cord suitable for outdoor use reduces the risk of electric shock.

Personal safety

9. Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication. A moment of inattention while operating power tools may result in serious personal injury.

- Use safety equipment. Always wear eye protection. Safety equipment such as dust mask, non-skid safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce personal injuries.
- 11. Avoid accidental starting. Ensure the switch is in the off-position before plugging in. Carrying power tools with your finger on the switch or plugging in power tools that have the switch on invites accidents.
- 12. Remove any adjusting key or wrench before turning the power tool on. A wrench or a key left attached to a rotating part of the power tool may result in personal injury.
- Do not overreach. Keep proper footing and balance at all times. This enables better control of the power tool in unexpected situations.
- 14. Dress properly. Do not wear loose clothing or jewellery. Keep your hair, clothing, and gloves away from moving parts. Loose clothes, jewellery or long hair can be caught in moving parts.
- 15. If devices are provided for the connection of dust extraction and collection facilities, ensure these are connected and properly used. Use of these devices can reduce dust-related hazards.

Power tool use and care

- 16. Do not force the power tool. Use the correct power tool for your application. The correct power tool will do the job better and safer at the rate for which it was designed.
- 17. Do not use the power tool if the switch does not turn it on and off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.
- 18. Disconnect the plug from the power source and/ or the battery pack from the power tool before making any adjustments, changing accessories, or storing power tools. Such preventive safety measures reduce the risk of starting the power tool accidentally.

- 19. Store idle power tools out of the reach of children and do not allow persons unfamiliar with the power tool or these instructions to operate the power tool. Power tools are dangerous in the hands of untrained users.
- 20. Maintain power tools. Check for misalignment or binding of moving parts, breakage of parts and any other condition that may affect the power tools operation. If damaged, have the power tool repaired before use. Many accidents are caused by poorly maintained power tools.
- Keep cutting tools sharp and clean. Properly
 maintained cutting tools with sharp cutting edges
 are less likely to bind and are easier to control.
- 22. Use the power tool, accessories and tool bits etc. in accordance with these instructions and in

the manner intended for the particular type of power tool, taking into account the working conditions and the work to be performed. Use of the power tool for operations different from those intended could result in a hazardous situation.

Service

- 23. Have your power tool serviced by a qualified repair person using only identical replacement parts. This will ensure that the safety of the power tool is maintained.
- 24. Follow instruction for lubricating and changing accessories.
- Keep handles dry, clean and free from oil and grease.

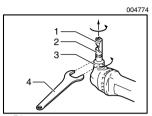

ADDITIONAL SAFETY RULES FOR TOOL

FNB073-1

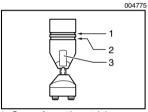

- 1. Hold the tool firmly.
- 2. Secure the workpiece firmly.
- 3. Keep hands away from moving parts.
- Edges and chips of the workpiece are sharp.
 Wear gloves. It is also recommended that you put on thickly bottomed shoes to prevent injury.
- Do not put the tool on the chips of the workpiece. Otherwise it can cause damage and trouble on the tool.
- Do not leave the tool running. Operate the tool only when hand-held.
- Always be sure you have a firm footing.
 Be sure no one is below when using the tool in high locations.
- Do not touch the punch, die or the workpiece immediately after operation; they may be extremely hot and could burn your skin.
- Avoid cutting electrical wires. It can cause serious accident by electric shock.

SAVE THESE INSTRUCTIONS

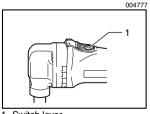

FUNCTIONAL DESCRIPTION

- Die
- 2. Die holder
- 3. Lock nut
- 4 Wrench

- 1. Gauge for cutting stainless: 1.2 mm (3/64")
- 2. Gauge for cutting mild steel: 1.6 mm (1/16")
- 3. Notch

Switch lever

Always be sure that the tool is switched off and unplugged before adjusting or checking function on the tool.

Changing the die position

The die position can be changed 360°. To change it, proceed as follows.

- Loosen the lock nut with the wrench provided.
- Pull the die holder slightly and turn it to the desired position for operation.
- Tighten the lock nut to secure the die holder in the desired position.

There are four positive stops at 90° each: 0°. 90° left and right and 180°. To position the die to any of these positive stops:

- Loosen the lock nut with the wrench provided.
- Pull the die holder slightly and depress lightly while turning it to the desired position. The die holder will lock into one of the positive stop positions as desired.
- Turn the die holder slightly to make sure that it is positively locked into position.
- Tighten the lock nut to secure the die holder.

Permissible cutting thickness

The thickness of material to be cut depends upon the tensile strength of the material itself. The groove on the die holder acts as a thickness gauge for allowable cutting thickness. Do not attempt to cut any material which will not fit into this groove.

Cutting line

The notch in the die holder indicates your cutting line. Its width is equal to the cutting width. Align the notch to the cutting line on the workpiece when cutting.

Switch action

Before plugging in the tool, always check to see that the switch actuates properly and returns to the "OFF" position when the rear of the switch lever is depressed.

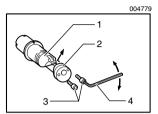

To switch on, depress the rear of the switch lever and push it forward. Then depress the front of the switch lever to lock it.

To switch off, depress the rear of the switch lever.

ASSEMBLY

⚠ CAUTION:

 Always be sure that the tool is switched off and unplugged before carrying out any work on the tool.

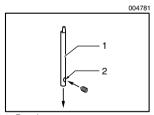

Removing or installing the punch and die

Always replace the punch and die as a set. To remove the punch and die, loosen the lock nut with the wrench. Remove the die holder from the tool. Use the hex wrench to loosen the bolts which secure the die. Remove the die from the die holder.

- 1. Die holder
- 2. Die
- 3. Bolts
- 4. Hex wrench
- 004780 1 2 3

Use the hex wrench to loosen the screw which secures the punch. Pull the punch out of the punch holder.

- 1. Punch
- 2. Punch holder
- 3. Screw
- 4. Hex wrench

- 1. Punch
- 2. Notch

To install the punch and die, insert the punch into the punch holder so that the notch in the punch faces toward the screw. Tighten the screw to secure the punch. Install the die on the die holder. Tighten the bolts to secure the die.

1 4 3

Then install the die holder on the tool so that the punch is inserted through the hole in the die holder. Tighten the lock nut to secure the die holder. After replacing the punch and die, lubricate them with machine oil and run the tool for a while.

- 3. Punch
- 4. Die holder

OPERATION

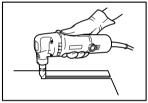

Pre-lubrication

Coat the cutting line with machine oil to increase the punch and die service life. This is particularly important when cutting aluminum.

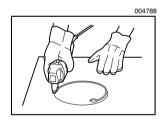

Cutting method

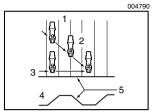

Hold the tool so that the cutting head is at a right angle (90°) to the workpiece being cut. Move the tool gently in the cutting direction.

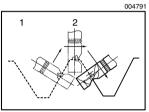

Cutouts

Cutouts can be done by first opening a round hole over 21 mm in diameter which the cutting head can be inserted into.

- 1. From the top view
- 2. Cutting at an angle to grooves
- 3. Cutting perpendicular to grooves
- 4. From the side view
- Corrugated or trapezoidal sheet metal

- 1. From the side view
- 2. Cutting head should be at a right angle (90°) to cutting surface.

Cutting the corrugated or trapezoidal sheet metals

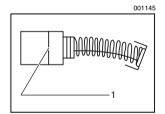

Set the die position so that the die faces the cutting direction either when cutting at an angle or perpendicular go grooves in corrugated or trapezoidal sheet metals.

Always hold the tool body parallel to the grooves with the cutting head at a right angle (90°) to the cutting surface as shown in the figure.

MAINTENANCE

 Always be sure that the tool is switched off and unplugged before attempting to perform inspection or maintenance.

1. Limit mark

Replacing carbon brushes

Remove and check the carbon brushes regularly. Replace when they wear down to the limit mark. Keep the carbon brushes clean and free to slip in the holders. Both carbon brushes should be replaced at the same time. Use only identical carbon brushes.

Brush holder cap

2. Screwdriver

Use a screwdriver to remove the brush holder caps. Take out the worn carbon brushes, insert the new ones and secure the brush holder caps.

To maintain product SAFETY and RELIABILITY, repairs, any other maintenance or adjustment should be performed by Makita Authorized Service Centers, always using Makita replacement parts.

ACCESSORIES

⚠ CAUTION:

These accessories or attachments are recommended for use with your Makita tool specified in this manual. The
use of any other accessories or attachments might present a risk of injury to persons. Only use accessory or
attachment for its stated purpose.

If you need any assistance for more details regarding these accessories, ask your local Makita service center.
